In addition to the extensive standard equipment for performance, driving dynamics and off-road capabilities, the Porsche 911 Dakar also features the highest-quality solutions for comfort and safety. The standard equipment package includes dark-tinted LED main headlights with matrix beam, incl. PDLS Plus, HomeLink® (garage-door opener), Sport Chrono Package, GT sports steering wheel, Warn and Brake Assist, comfort access and ParkAssist including reversing camera and SurroundView. A generous array of infotainment equipment provides entertainment and connectivity, while the audio reproduction in the car is enhanced by a standard Bose® Surround Sound System.

The optional Rallye Sport Package, which can be ordered in most markets, offers protection that has been optimised even further on off-road and rally drives. The package consists of a black-painted and powder-coated steel roll-over bar fitted behind the front seats and secured to the body. The Rallye Sport Package also includes two six-point seat belts and a fire extinguisher.

Roof rack and roof tent

In addition to all this, Porsche Tequipment offers special equipment packages for the 911 Dakar, including a roof rack that can be used to store matching accessories. Options include fuel and water canisters, traction boards and a folding shovel. Porsche Lifestyle offers matching, exceptionally robust luggage. The roof rack weighs 28 kg and can handle a payload of 42 kg. Its LED lighting is supplied with power by using the standard roof power socket on the 911 Dakar via a magnetic coupling. The LED lights can be switched on and off with a button in the interior roof console. Use of this additional lighting is not permitted on the public highway.

Instead of the roof rack, a two-person fold-out tent can be fitted on the roof transport system. In addition to the tent, the hard case with its Porsche-specific design also contains a ladder, a mattress, anti-theft protection and storm protection. The tent can be set up within minutes in just a few steps. It weighs 58 kg and is designed for a maximum load of 140 kg.
