

# The decarbonization index: Collecting greenhouse gas emissions per vehicle

11/03/2026 Porsche has a clearly defined mission: to reduce greenhouse gas emissions across the value chain and throughout the entire life cycle of its vehicles.

With its diverse product portfolio and the consistent further development of drive technologies with lower greenhouse gas emissions, Porsche is committed to offering innovative solutions for future mobility and actively driving Change. Porsche is flexibly positioning its range of combustion-engined, plug-in hybrid and all-electric vehicles.

This caters for the fact that the ramp-up of electrification depends crucially on customer demand, the development of electromobility in the different regions of the world and the regulatory landscape. In response to the current market situation, Porsche decided to realign its vehicle product strategy. This includes postponing the market launch of certain all-electric vehicle models and continuing to offer combustion and hybrid models for a longer period. In line with the new market realities, Porsche intends

to increase its share of electrified vehicles, albeit on a smaller scale than originally planned.

In 2025, the share of electrified vehicles delivered to customers—either all-electric or plug-in hybrids—was 34.4%.
